

START WITH LOKI

Our Digital Colleague actively supports buyers, purchasers, dispatchers, and coping with similar work processes in their hectic day-to-day business.

ABOUT LOKI

Anyone working in the area of procurement is constantly confronted with situations where decisions have to be made quickly and measures taken instantly. Therefore, supplier performance must be analysed precisely, and the resulting actions evaluated according to criticality. This is exactly where our Digital Colleague **LOKI** with his analytical abilities comes into play. Based on self-developed, specific machine learning – compositions **LOKI** is able to assess complex situations and recommend a course of action within a few minutes.

Those recommendations can be executed directly by **LOKI** or, if desired, by the purchaser himself. The quality of analysis and recommendations for action is regularly and continuously assessed by experts and reported back to **LOKI**, thus ensuring a continuous improvement process. The result is a hybrid learning organisation where both, the human and the machine, can significantly improve their performance.

1st AI-BOT SKILL

Calculation of optimized planned delivery times and safety stocks

2nd AI-BOT SKILL

Recommendations & execution of actions for purchasing colleagues (email, phone call, etc.)

RESULTS

~30% time saved per purchaser
~80% improved planned delivery times
~20% improved availability of parts

USAGE

Purchase
Supply Chain Management
Distribution
